Demonstration
of Thunderbolt™
technology
and the
Multimedia
Server Hard Drive

Wednesday, let us welcome LaCie.

LaCie is the maker of the new LaCie Little Big Disk, built on technology developed by Intel and supported by Apple. This disk uses the new Thunderbolt™ technology that plugs into the latest Apple computers.

You can read more at:

<http://www.lacie.com/products/>

LaCie also makes Multimedia hard drives such as; LaCie Classic HD (High definition Network Media Player), LaCinema PlayHD (Ready to PlayHD), LaCinema Mini HD (Wi-Fi High Definition Media Center) and more!!.

We are kinna hoping Maciej will show off one of these just to impress us all.

LaCie products are available at
Creative Technology. Happy New Year Happ

*Happy New Year
and
welcome back.*

Burlington, ON

The Apple Macintosh User Group of Hamilton is a non-profit organization that meets informally at **6:30 PM**, the second Wednesday of each month at: **Creative Technology, 3480 Fairview St., Burlington.**

This group is made up of users of the Apple Macintosh family of personal computers, whose interests range from word processing to publishing, music and games, art to accounting and often times to formal presentations or more. Our main purpose is to provide a forum for questions, solutions and inspiration for everyday computing.

For more information about the user group, please attend the next Club meeting, contact a member of the executive, or visit our web site:

www.hamiltonmacintosh.com

This newsletter produced using Adobe InDesign CS3, part of the Adobe Design Collection CS3, on an iMac computer and a PowerBook G4 laptop.

Jim Auty

Editor's Notes

I must apologize for not having a newsletter of substantial size ready at this time. The holiday season had me working ten hour days. As chief cook at home, meals ate away the rest of a day's time for the other activities.

There is much to write about for future issues.

If you have seen the GoPro® cameras that have been used in surfing, skiing and many other areas, then you'll be reading about how my son, Tyler, used his during his trip to Costa Rica.

These little cameras can be worn on your head, helmet, chest, wrist or where ever you can stick a support. If you look for them, you will see them in use on TV shows like *Canada's Worst Drivers*, *Myth-busters* and more.

Why should you read about a camera like this?well, you will just have to wait and read about how these videos and photos get processed on a MAC !!

I will be assembling all the holiday photos in iPhoto. Then, using iMovie, I'll put together a presentation to e-mail to relatives.

Tips learned, at Creative Technology's evening presentations last November and December, will be put to use and related to you in a 'tutorial' style report. There have been many websites of interest visited over the last few months and the best of these will be reviewed and presented for your perusal.

Windows 7 is now installed on my MacBook. I'll relate to you how it was installed and how it get used. Vista is installed on the iMac but is used differently.

If you are like me and have way too much stuff collecting on your computer, I'll go over what I have done to back-up information by:

- using an external hard drive
- writing to CD / DVD.

Then what to do with all those CD's or DVD's. What I've done and something about what is available out there. Then some disturbing news about the longevity of those CD's / DVD's compared to the printed photos. What to do?

I'm always on the lookout for neat and different accessories and gadgets. If you come across anything interesting, share it with me whether it is really useful or just nonsense. With your help, this newsletter can get a little more interesting for this year.

Welcome back for this new year. I am looking forward to what could become a very interesting season. Participate. Contribute. Learn. Enjoy.
